The International Conference for Physics Students (ICPS) held at Krakow, Poland, from 6th – 13th Aug 08 was an enriching event. Over there, I got to interact with students from all over the world, making new friends and learning about their cultures. I had the opportunity to give a lecture to a group of international students and it was really exciting to talk in front of unfamiliar faces. I also attended lectures from other students, learning about new and interesting stuffs such as the ‘God particle’ Higgs boson. The conference was not just purely educational but also packed with fun activities like tours, international games and parties. One of the parties which I enjoyed the most was the National Party where students brought delicacies and presented songs and dances from their own countries. Chewing a Spanish raw beef sandwich and sipping a Brazilian sugar cane alcohol, while watching Turkish belly-dancing was an unforgettable experience.
